

Verify Connect Token

The **Verify Connect Token** endpoint lets verify the current connect token.

Endpoint

```
GET https://demo-api.frontpayment.no/api/v1/connect/token/verify
```

Authorization

Include a **Bearer Token** (which we are going to verify) in the `Authorization` header. You can obtain this token from **Front Payment**.

Example:

```
Authorization: Bearer YOUR_FRONTPAYMENT_BEARER_TOKEN
```

Response

A successful request will return a `200` status with the following JSON payload:

```
{
  "status_code": 200,
  "status_message": "OK",
  "message": "tokenIsValid",
  "is_data": true,
  "data": null
}
```

API returns a `401` error, it means either token is incorrect or it has expired.

```
{
  "status_code": 401,
  "status_message": "Unauthorized",
  "message": "tokenIsInvalidOrExpired",
  "is_error": false,
}
```

```
"data": null  
}
```

API returns a 510 error, it means something failed on the server side

```
{  
  "status_code": 510,  
  "status_message": "Execution Exception Occurred",  
  "message": "Something Went Wrong",  
  "is_error": true,  
  "errors": "Array"  
}
```
